

1 **ABSTRACT OF THE DISCLOSURE**

2 A light bulb structure includes a closed bulb receiving therein two magnesium
3 wires connected with each other via a tungsten filament and an insulator connected to
4 each of the two magnesium wires for separating the two magnesium wires, a closed
5 lamp shade enclosing therein the bulb and allowing an extension of the two magnesium
6 wires out of the lamp shade and a mounting base securely connected to a bottom of the
7 lamp shade and allowing the two magnesium wires to extend out of the mounting base.
